

Developing *effective* data scientists

Erin Shellman PhD
Data Science Kick-off
University of Michigan
October 6, 2015

I'm Erin and I'm a
data scientist.

...and an alum!

MS in Biostatistics '08

PhD in Bioinformatics '12

effective

data scientists

communicate well.

Student's to-do:

1. Present your work
2. Blog
3. Teach others

Teacher's to-do:

Center coursework
on presentation and
communication

effective

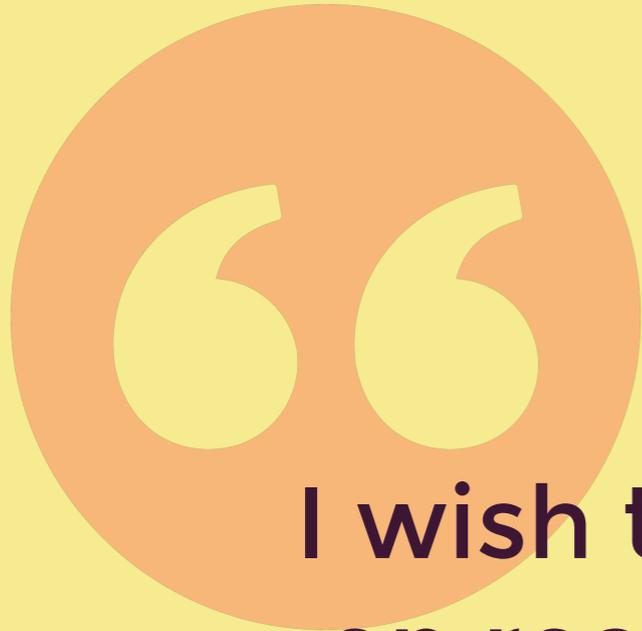

data scientists write
high-quality code.

**The single most useful thing I learned
in grad school was how to work with
data in Python.**

–Sarah Guido, Data Scientist @ Bitly and UM alum

**I wish there had been more emphasis
on real data/messy data/getting my
own data/cleaning data.**

–Trey Causey, Data Scientist @ ChefSteps, @4thdownbot

Student's to-do:

1. Develop deep expertise in a programming language
2. Adopt good coding practices now

Teacher's to-do:

1. Expose students to a variety of datasets
2. Focus on applications

effective

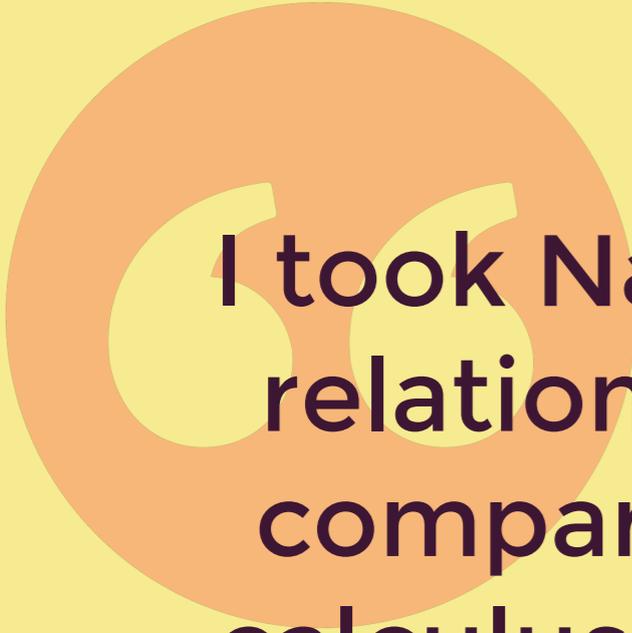

data scientists are
curious, life-long
learners.

LEARN MORE CODING AND STATISTICS. Meet other people working on data sets not in your field. Learn something not in your field. Don't sit in a box staring at your thesis project.

–Wendy Grus, Technical Data Analyst @ Inrix and UM alum

I took Naval Criminal Law & international relations. It was hard to stay awake. By comparison, I looked forward to vector calculus and loved Matlab. Lesson: Don't be afraid to explore your options while you are still on the track of figuring out what comes next.

–Amanda Casari, Senior Data Scientist @ Concur

Boundaries between disciplines are becoming less-defined. There are general, powerful patterns of thinking that apply to many disciplines. A good way to become aware of these patterns is to broaden exposure to disciplines.

–James Pestrak, Senior Data Scientist @ Nordstrom

Student's to-do:

1. Pursue academic interests outside your discipline
2. Go to meet-ups!

Teacher's to-do:

1. Teach with diverse datasets
2. Illustrate parallels between disciplines

Big ups to these *effective*
data scientists

Amanda Casari

Trey Causey

Wendy Grus

Sarah Guido

James Pestrak
